VaultDocumentPublisher

netvision provides a reliable way to create ancillary documents.

Do you need PDFs after releasing your drawings? Do you need a flat pattern for your workshop as soon as the part is designed and released? Do your designers spend too much time compiling required drawings of their assemblies?

netvision offers the solution!

netvision VaultDocumentPublisher takes you up on your challenges. The documents can be created automatically via the jobserver or manually at any time. All functions are tightly integrated into the Vault user interface.

System requirements:

Supported software:
– Autodesk Vault® Workgroup 2013, 2014, 2015, 2016 and 2017
– Autodesk Vault® Professional 2013, 2014, 2015, 2016 and 2017

Supported operating systems:
– Windows® Server 2003, 2008, 2008R2 and 2012
– Windows® 10, 8/8.1, 7, XP and Vista

Flexible and extendable

netvision VaultDocumentPublisher enables users to extend functionality by user defined scripts. Using IronPython, a .NET based scripting language, users can add any required function. Typical Vault actions can be fully automated. Settings regarding the creation of ancillary documents, storage paths, etc. can easily be adjusted via the system configuration. In larger environments the settings can be transferred using XML document or XML settings.

netvision-VaultDocumentPublisher creates more efficiency.

Automated management of ancillary documents

PDF creation:
– Workflow or manually assigned watermarks
– Copy to external folder structure
– Output as PDF or PDF/A for long time digital preservation
– Output as single- or multipage PDF
– User defined file name prefix and suffix, including
Vault properties (e.g.Revision)

**Predefinded PDF jobs (Jobserver and/or manual)**
– Creation of PDFs based on Vault workflows (for ex. Release)
– Creation of all PDFs inside a Vault folder
– Creation of all PDF's referenced by assembly

Predefined DWG/DXF jobs (Jobserver and/or manual):
– Creation of DXF/DWG-Formats based on Vault workflows
   (for ex. Release)
– Creation of all DXF/DWGs of all drawings referenced by assembly
– Creation of all DXF/DWGs inside a folder
– Creation of flat pattern DXF/DWGs of sheet metal parts

Configurable attachment jobs (Jobserver and/or manual):
– Creation of neutral 3D formats for Inventor documents
   (e.g. STEP, SAT, IGES)

Workgroup functionality:
– Automated e-mails for IT administrators (e.g. Error reports)
– Automated e-mails including attachments based on workflows

Installation and configuration:
– GUI-Based configuration
– XML deployment for large environments
